

**PREMIER SIPS**  
STRUCTURAL INSULATED PANELS

# SUPERIOR BUILDINGS

UNLOCKING EFFICIENCY,  
DURABILITY & SUSTAINABILITY

Embarking on the journey of building or renovating your dream home? Look no further than **Premier Structural Insulated Panels (SIPs)** – the ultimate solution that revolutionizes the cost of construction and transforms it into a smart investment. With **Premier SIPS**, you not only unlock long-term financial benefits but also prioritize the health and well-being of your family while actively contributing to a more sustainable environment. Discover the remarkable advantages that Premier SIPs bring to your project.

## WHY HOMEOWNERS PREFER SIPs:

- **Healthier** for the family
- More **energy savings** for the wallet
- **Greener** choice for the planet

# SIPS BENEFITS FOR HOMEOWNERS

- 1 ENERGY EFFICIENCY**  
SIPs provide superior insulation, reducing energy consumption and decreasing heating and cooling costs. This results in long-term savings on utility bills, regularly 40-60%!
- 2 FASTER CONSTRUCTION, GREATER SAVINGS**  
SIPs arrive at home sites ready to install. Large pre manufactured panels install twice as fast as traditional methods. This means homes are dried in faster, construction time is reduced by 55%, families can move in faster and everyone saves on construction load interest/carrying costs..
- 3 COMFORTABLE LIVING SPACES**  
The excellent thermal performance of SIPs helps maintain consistent indoor temperatures, minimizing drafts and temperature variations. This creates comfortable living spaces throughout the year.
- 4 SOUND INSULATION**  
SIPs have good soundproofing properties, reducing external noise infiltration and creating a quieter indoor environment.
- 5 DURABILITY & STRENGTH**  
SIPs are highly durable and structurally strong, offering long-lasting performance. They can withstand extreme weather conditions, including high winds and seismic events. Since 1977 Premier SIPs are proven to withstand the forces of tornados, hurricanes and earthquakes.
- 6 ENVIRONMENTAL SUSTAINABILITY**  
SIPs are made with eco-friendly materials making them 100% recyclable. The tight building envelope SIPs create contribute to reduced energy consumption, carbon emissions, which equates to a 40-60% energy cost savings (and beyond for net-zero construction). They have a smaller environmental footprint and truly make a difference for the future of our planet.
- 7 HEALTHIER INDOOR ENVIRONMENTS**  
SIPs' airtight construction minimizes air leakage, which helps maintain better indoor air quality by reducing the infiltration of allergens, pollutants, and external contaminants (such as smoke). In fact, choosing Premier SIPs in many building applications, earns clean air gold certification.
- 8 REDUCED MAINTENANCE**  
Without worrying about imperfections of stick framed lumber to create a building envelope, SIPs are engineered with precision, require minimal maintenance over their lifespan, contributing to long-term cost savings for building owners.
- 9 RESALE VALUE**  
Buildings constructed with SIPs often have higher resale value due to their energy efficiency, durability, and desirable indoor health and comfort features.
- 10 WARRANTY**  
SIPs come with a 20-year structural warranty and the insulation core comes with a 50-year thermal warranty, something you will simply not find with traditional site framed 2x6" wood construction
