

**PREMIER SIPS**  
STRUCTURAL INSULATED PANELS

# FRAMEGUARD

## PRODUCT OVERVIEW

You're designing a new building for your client. This is your one chance to specify mold-resistant framing and prevent mold problems in the future. Premier SIPS with FrameGuard coating is your solution and gives your client an added level of protection; plus, it's backed by a warranty.

### ADVANTAGES:

- Protects against mold
- Protects against fungal decay
- Protects against termite damage

## BUILT-IN MOLD, FUNGAL DECAY, AND TERMITE PROTECTION

Premier SIPS are heavyweights against the destructive agents of mold, fungal decay, and termites. The Premier MPS in Premier SIPS is treated with borate termite protection. And the entire SIP, when treated with the FrameGuard Coating prevents mold, fungal decay, and termite damage to its wood components.

### SAFE AND EFFECTIVE

Premier SIPS FrameGuard Coated are protected with organic fungicides and a borate compound tested to be effective. The organic compounds remain close to the surface to provide protection against mold; moldicides inhibit the enzymes' ability to break down the wood and consume the sugars and starches mold needs for growth. Meanwhile the borate component penetrates into wood providing protection against both fungal decay and termites.

## BUILT-IN PROTECTION

Wood Treated Right™

When you specify Premier SIPS FrameGuard Coated, your projects gain built-in protection against future costly repairs due to mold, fungal decay, and termites.

From the time Premier SIPS arrive on the job site, throughout construction and after occupancy of the structure, FrameGuard Coating continues to protect the Premier SIPS structure and the owner's investment. Using FrameGuard Coated Premier SIPS and wood components is the smart choice for today's higher performing buildings.

### GO GREEN

You will know Premier SIPS FrameGuard Coated when you see them. A distinctive green colorant identifies wood treated with FrameGuard Coating.

## TESTING PROVES FRAMEGUARD COATED WOOD EFFECTIVE

Field installations and laboratory tests show FrameGuard Coated wood to be highly effective for inhibiting the growth of mold. FrameGuard Coated wood also protects against fungal decay and termites.
